Bachelor of Technology in Computer Science

## • ACTIVITY DIAGRAM

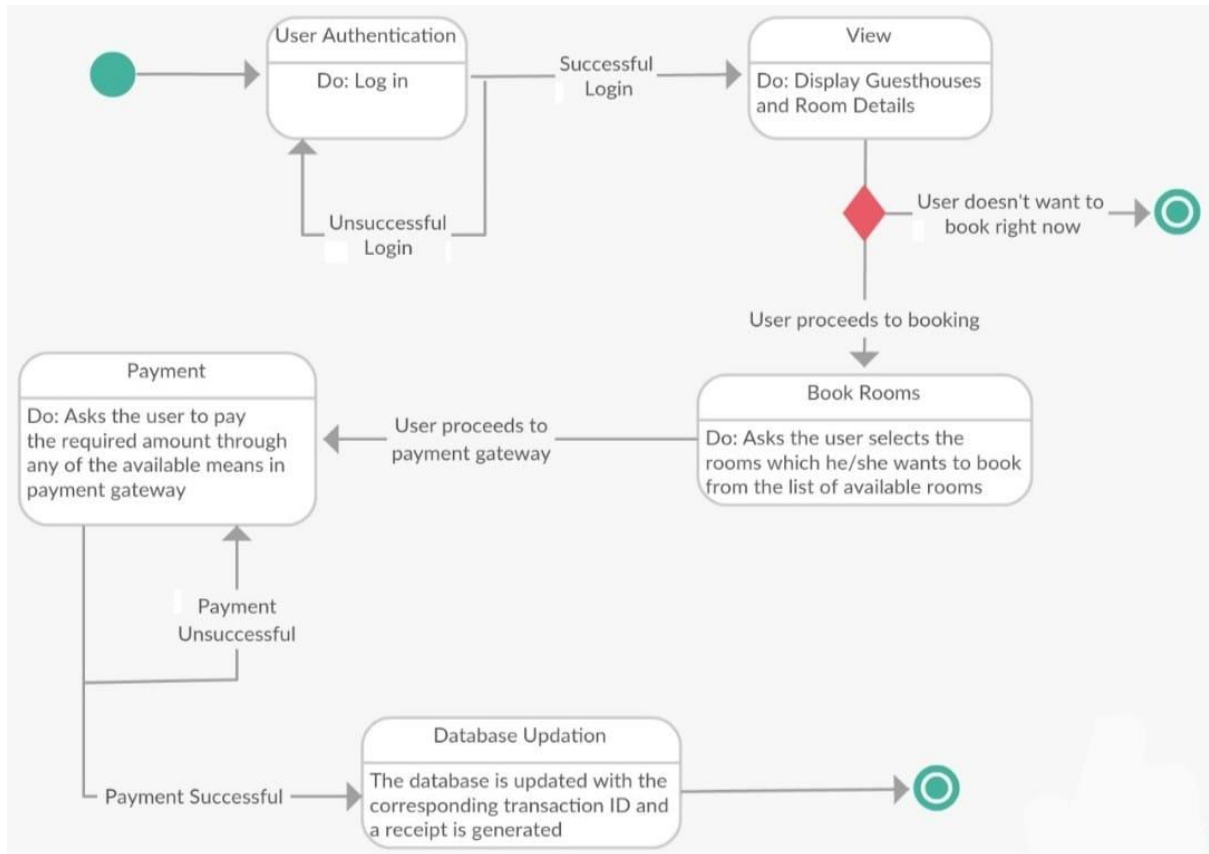

Activity diagram captures the dynamic behaviour of the system. activity diagram is used to show message flow from one activity to another.

- SEQUENCE DIAGRAM

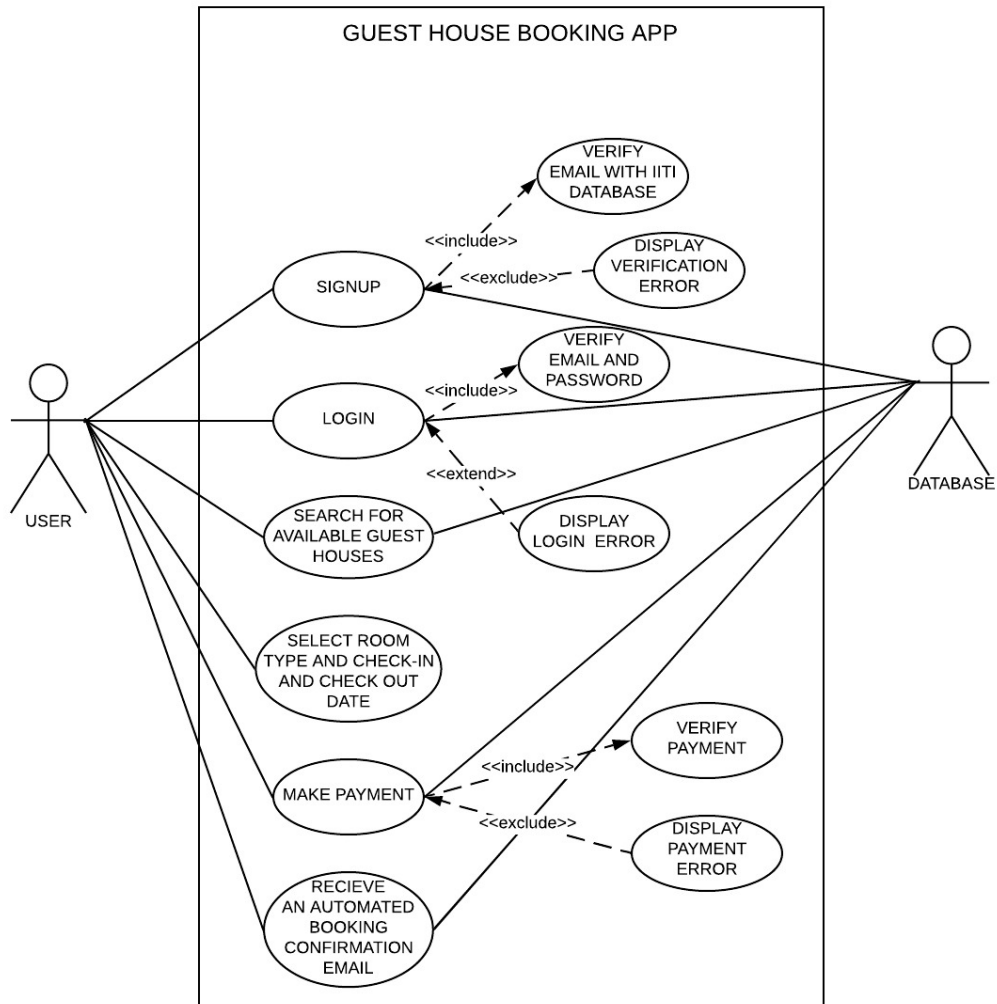

A sequence diagram simply depicts interaction between objects in a sequential order i.e. the order in which these interactions take place. The terms event diagrams or event scenarios are also used to refer to a sequence diagram.

- STATE DIAGRAM

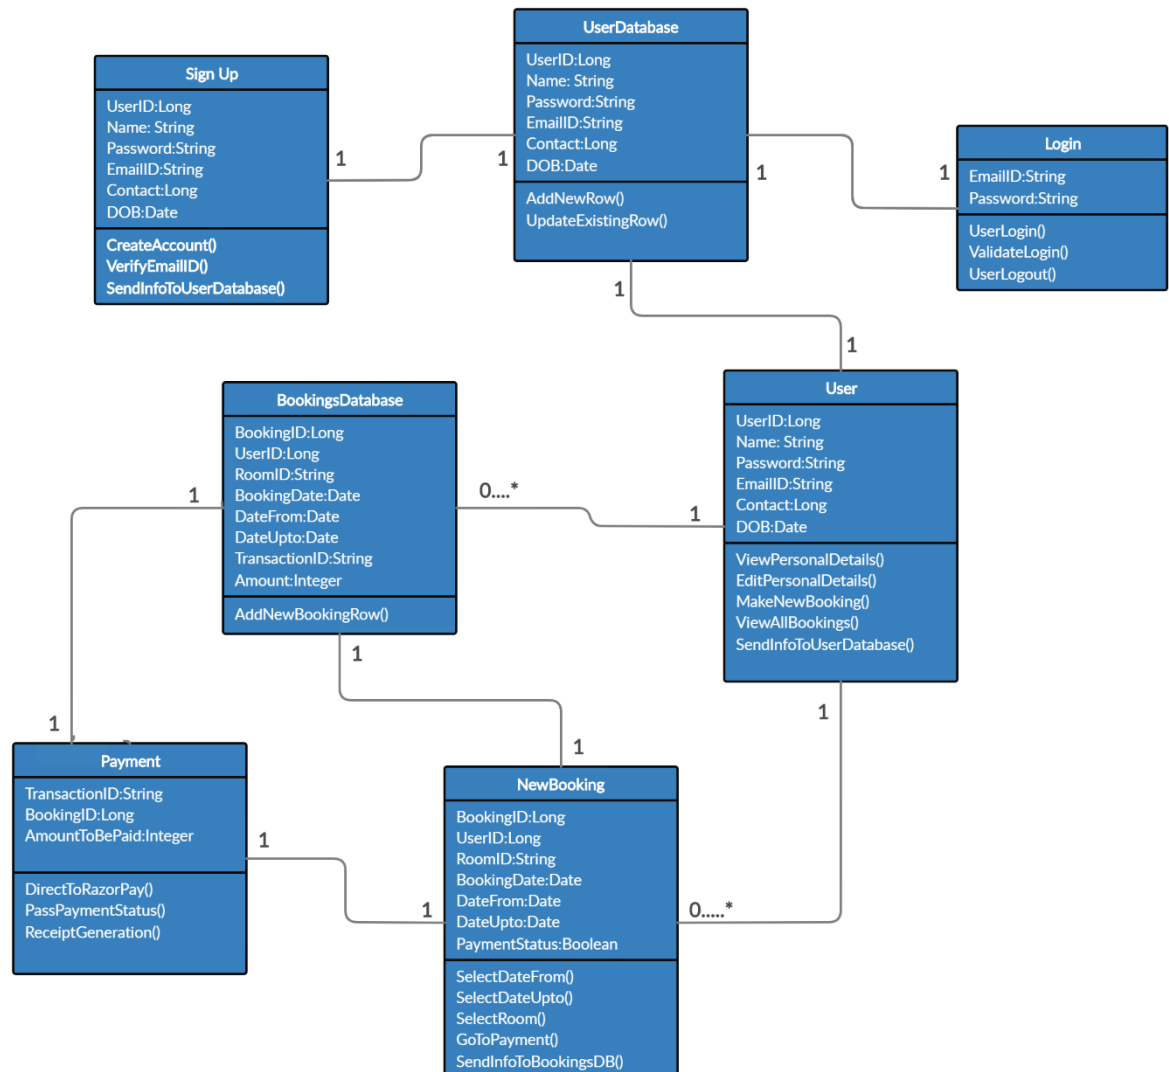

State Diagrams are used to model the dynamic nature of a system. They define different states of an object during its lifetime and these states are changed by events.

- USE CASE DIAGRAM

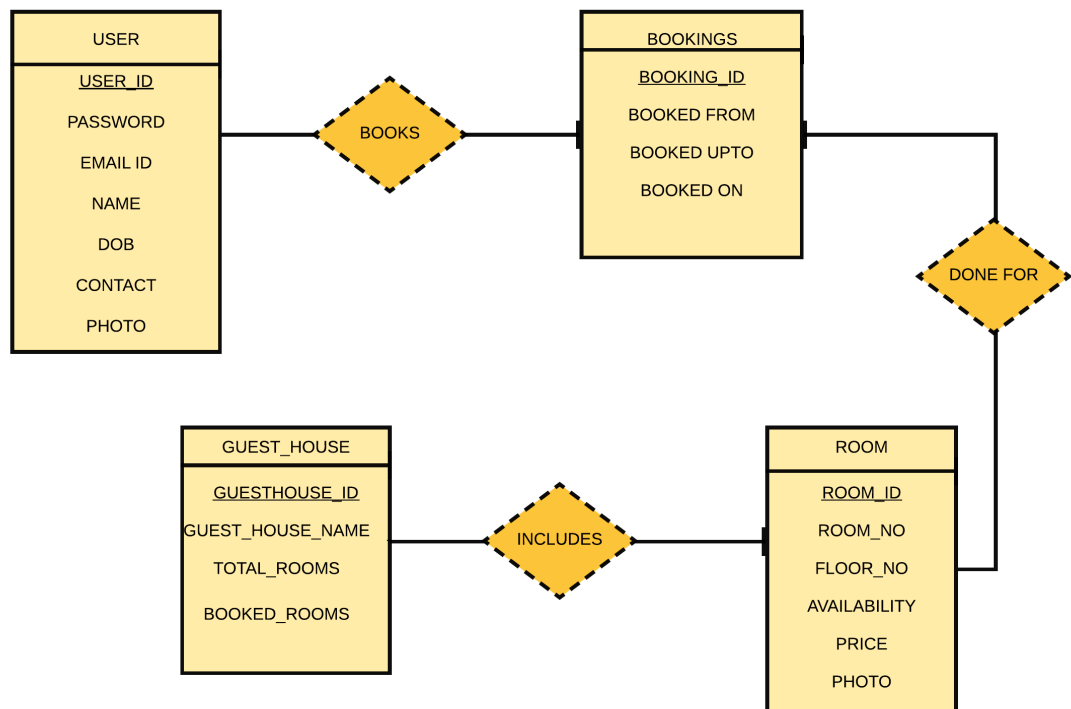

Use case diagrams are used to gather the requirements of a system including internal and external influences.

- CLASS DIAGRAM

The purpose of class diagram is to model the static view of an application. Class diagrams are the only diagrams which can be directly mapped with object-oriented languages and thus widely used at the time of construction.

- ER DIAGRAM

ER diagram describes the structure of the database and the relationships between the various entities.
